Organization: [REDACTED]	Patient VFC Status: All	
Evaluate At Age: All		

Aggregate (Total Only)	Total Patients	Received Dose
TOTAL	583	481 (83%)

Additional Considerations:

- You have to run a report by product since the MenB vaccines are NOT interchangeable. If you have only ever used one brand, then no need to run a second report by the other brand. Meningococcal B, OMV = Bexsero, Meningococcal B, Recombinant = Trumemba
- To see how many patients, have one dose MenB but have not completed the series you can select *incomplete series or one dose to complete series* in the “display report columns” section when setting up the report
- You can run from 16-18 to see all patients who are eligible by age and received vaccine, you can also include *missed opportunities* to see those who are age eligible who could have been immunized but were not.
- Follow up the coverage reports with running reminder/recall reports to reach out to those who are missing a dose to complete the series.
- If a patient receives their first dose of MCV4 after 16 years of age a booster dose is not required.

*These directions were created by a WA clinic and provided as an example of how one clinic runs coverage reports for all potential adolescent vaccinations. MenB vaccines have a “shared clinical decision making” ACIP recommendation.

This was provided by Dr. Sherri Zorn at The Polyclinic - Pediatrics, Seattle, WA
